

## Focus on Robotics Weekend in the Ars Electronica Center

November 28 & 29, 2009

Some evince our striving for efficiency; others manifest a longing to create machines in our own image. It's the development of humanoid robots in particular that teaches us a lot about ourselves. What motion or perception actually is. And what's intelligence. In going about this, we recognize how highly developed we truly are, but also where we run up against our limitations ... The lineup at the Ars Electronica Center's Focus on Robotics Weekend includes programming robots, scrutinizing the link between nature and high tech, and getting a rundown on walkers (mobile robots) from experts at the Upper Austria University of Applied Sciences' Hagenberg Campus. Advance registration is required for all workshops..
